| Tech Stack : Python, LangGraph, LangChain, OpenAI GPT, RAG, ChromaDB, FastAPI, React.js, TypeScript, PostgreSQL, GitHub API, Docker                                                                                                                                                                                                                                                                                                                                                                                               |                        |      |
| Architected a multi-agent AI platform automating software development through intelligent requirement analysis, planning, architecture, coding, validation, testing, fixing, and documentation. Implemented LangGraph orchestration, RAG-based context retrieval, and GitHub integration for scalable end-to-end project generation.                                                                                                                                                                                              |                        |      |
| YouTube Productivity Extension                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="#">Github</a> | 2026 |
| Tech Stack: React, TypeScript, Plasmo, Chrome Extension API, IndexedDB, Tailwind CSS                                                                                                                                                                                                                                                                                                                                                                                                                                              |                        |      |
| Designed and deployed a cross-browser productivity extension that enhances focus by analyzing and filtering YouTube content based on user-defined learning preferences. Built dynamic feed processing, Shorts blocking, educational content prioritization, channel management, and persistent local storage features, resulting in a personalized and distraction-free video consumption experience while maintaining seamless integration with YouTube's interface.                                                             |                        |      |
| Smart Research Assistant                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="#">Github</a> | 2026 |
| Tech Stack: FastAPI, React.js, SQLite, ChromaDB, Ollama, Qwen2.5, BGE Embeddings, OpenAlex API                                                                                                                                                                                                                                                                                                                                                                                                                                    |                        |      |
| Designed and deployed a multi-agent AI research platform that automates paper discovery, summarization, comparison, document-grounded chat, and research report generation. Implemented a RAG pipeline using ChromaDB, BGE embeddings, and cosine similarity search with Ollama-hosted Qwen2.5 models, enabling accurate semantic retrieval and reducing hallucinations. Built PDF/DOCX export, persistent chat history, task tracking, and intelligent caching mechanisms to optimize research workflows and system performance. |                        |      |
